Features and Benefits

- Pre-aligned, pre-calibrated detector & spectrograph**
 Motorized, individually factory-calibrated systems – out-of-the-box operation and seamless integration to experimental set-ups
- Image astigmatism correction**
 Optimized toroidal optics enabling high density multi-track capabilities
- USB 2.0 interface**
 Plug and play connectivity, ideal for laptop operation alongside Andor USB cameras
- Motorized, indexed triple grating turret**
 Easily upgradable in-the-field
- Dual detector outputs**
 For extended wavelength coverage when combining Andor UV-Visible CCD and InGaAs cameras
 Compatible with Andor's range of CCD, ICCD & EMCCD cameras
- Wide range of accessories available**
 The ultimate in modular set-up and in-field upgradability, including:
 - Motorized slits & filter wheel
 - Microscope interfaces
 - Shutters
 - Fibre-optic & lens couplers
 - Multi-way fibre-optic bundles
 - Light sources and optics
- Silver-protected coated optics option**
 Most efficient for Near-Infrared detection when used in conjunction with Andor InGaAs cameras

Research-grade high performance spectrograph

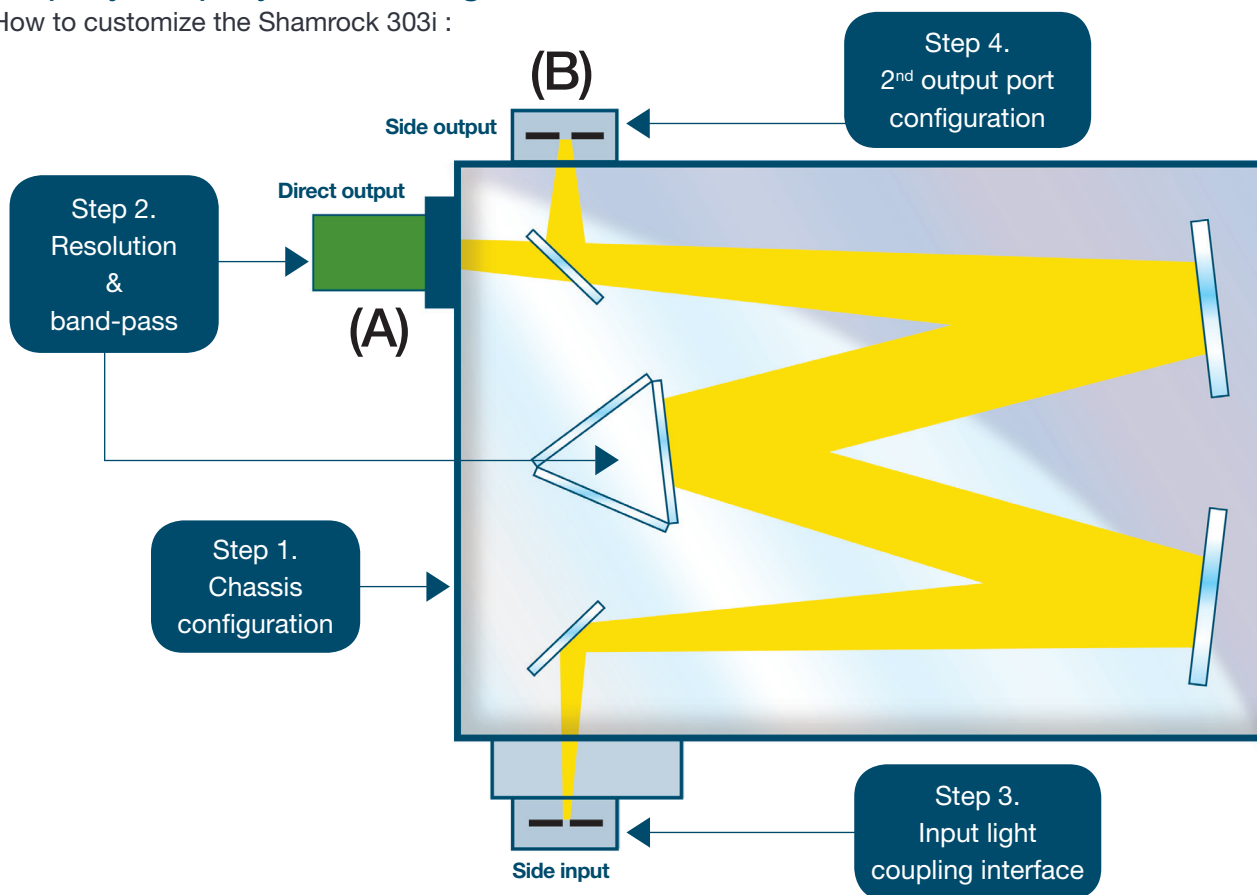

The Shamrock 303i spectrograph is a research-grade, high performance and rugged platform designed for working with demanding low-light applications, but equally suited to day-to-day routine measurements. It is a highly versatile platform configurable seamlessly with a wide range of light coupling interfaces and gratings upgradeable in-the-field. The Shamrock 303i can be seamlessly integrated with Andor's world-class range of CCDs, Electron-Multiplying CCDs, InGaAs and Intensified CCDs to offer a versatile, yet most sensitive modular solutions on the market. Andor Solis software offers the most user-friendly and state-of-the-art real-time control of detectors, spectrograph and motorized accessories at the touch of a button.

Specifications Summary

Resolution with Newton DU940 CCD	
1200 l/mm @ 500 nm	0.10 nm
2400 l/mm @ 300 nm	0.05 nm
Aperture	F/4
Focal length	303 mm
Magnification @ centre of CCD	
Vertical, spectral flange	1
Vertical, multi-track flange	1
Gratings	Interchangeable indexed triple turret
Slit width range (input/output)	Motorized 10 µm to 2.5 mm Wide aperture option to 12 mm
Communication	USB 2.0
Wavelength accuracy	0.04 nm
Wavelength repeatability	4 pm
Stray light	2.2 x 10 ⁻⁵

Step-by-Step System Configuration

How to customize the Shamrock 303i :

Step 1. - Chassis configuration

- Select either a single output port (model A) or dual output port (model B) option.
- Select type of optics coating required (aluminium + MgF_2 is standard, protected silver coated optics available on request for NIR detection).
- Select purge port option (for extended detection below 180 nm), and shutter for background acquisition and detectors protection.

Step 2. - Resolution & band-pass

- Select the appropriate Shamrock spectrograph platform, giving due consideration to bandpass and spectral range requirement.
- Select gratings and detector to fulfill resolution requirements.
- Select gratings for suitable wavelength coverage.

Step 3. - Input light coupling interface

Refer to accessory tree for available configurations (direct coupling, fibre coupling or 3rd party hardware connectivity).

Step 4. - 2nd exit port configuration

Refer to accessory tree for available configurations, including camera flanges.

Step 5. - Software interface

Select either state-of-the-art Solis software or Software Development Kit (SDK) option – please refer to appropriate section for further information.

Step 1 - Chassis Configuration

Optics Coatings Reflectivity Graph

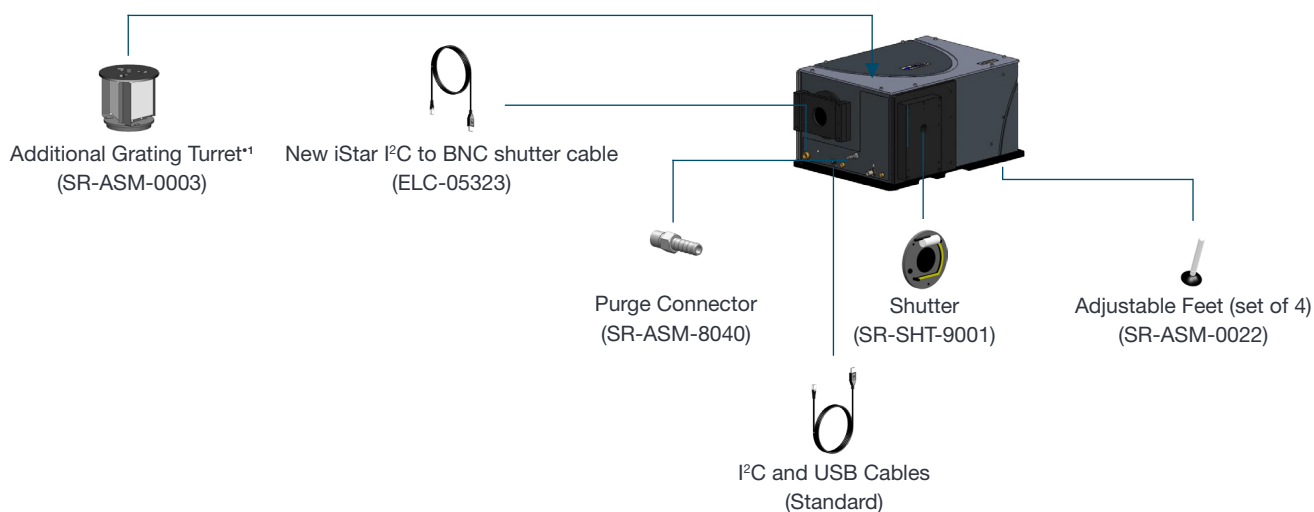

The graph shows the standard Al + MgF₂ optics coatings reflection efficiency versus wavelengths.

Protected silver coated optics option is also available on request for maximum efficiency in the NIR region and is recommended for working with Andor iDus InGaAs detectors.

When choosing protected silver coatings, it is strongly recommended to also order **protected silver coated gratings** for maximum efficiency throughout the system.

Step 2a - Choosing The Right Platform vs Dispersion Requirements

Resolution calculator
andor.com/calculators

Czerny-Turner spectrographs are designed to provide the best optical performance for a range of grating angles as indicated by the green parts of the graph above. Outside this range, the spectral lines may exhibit a degree of optical aberration (such as coma), which will become more prominent at the steeper angles. These configurations are indicated by the orange to red scales on the graph. In these regions, consideration should be given to higher spectrograph focal length models with lower groove density gratings to achieve the desired resolution.

Resolution (nm) ^{*3,*4}	0.35	0.18	0.09	0.04	0.03	0.02 ^{*5}

Where aberration is a concern for a particular experimental set-up, the table above shows resolution and band-pass performance for a variety of alternative configurations. This should be used in conjunction with the graph above to assist in selecting the most appropriate Shamrock spectrograph platform to meet resolution and band-pass needs, whilst minimising the risk of potential aberration.

Step 2b - Choosing The Right Grating vs Resolution & Band-pass

The Shamrock 303i features an innovative triple grating turret, designed to offer flexibility and control over your choice and interchange of gratings. The triple grating turret can be easily and speedily removed, and replaced by an alternative turret with new gratings. The intelligent design of the 303i means that only a simple offset adjustment is required once the new turret and gratings are added. The 303i is shipped with the grating turret already in place, ensuring your system is ready for use straight out of the box. Additional grating turrets are available with up to three pre-installed gratings per turret (see below for details). If the grating you require is not on the list, please contact Andor for further details. Additional grating turret(s) (part number SR-ASM-0003) can also be supplied on request.

Step 2c - Selecting The Correct Grating Efficiency Option

All graphs shown below represent efficiency for 45° polarisation

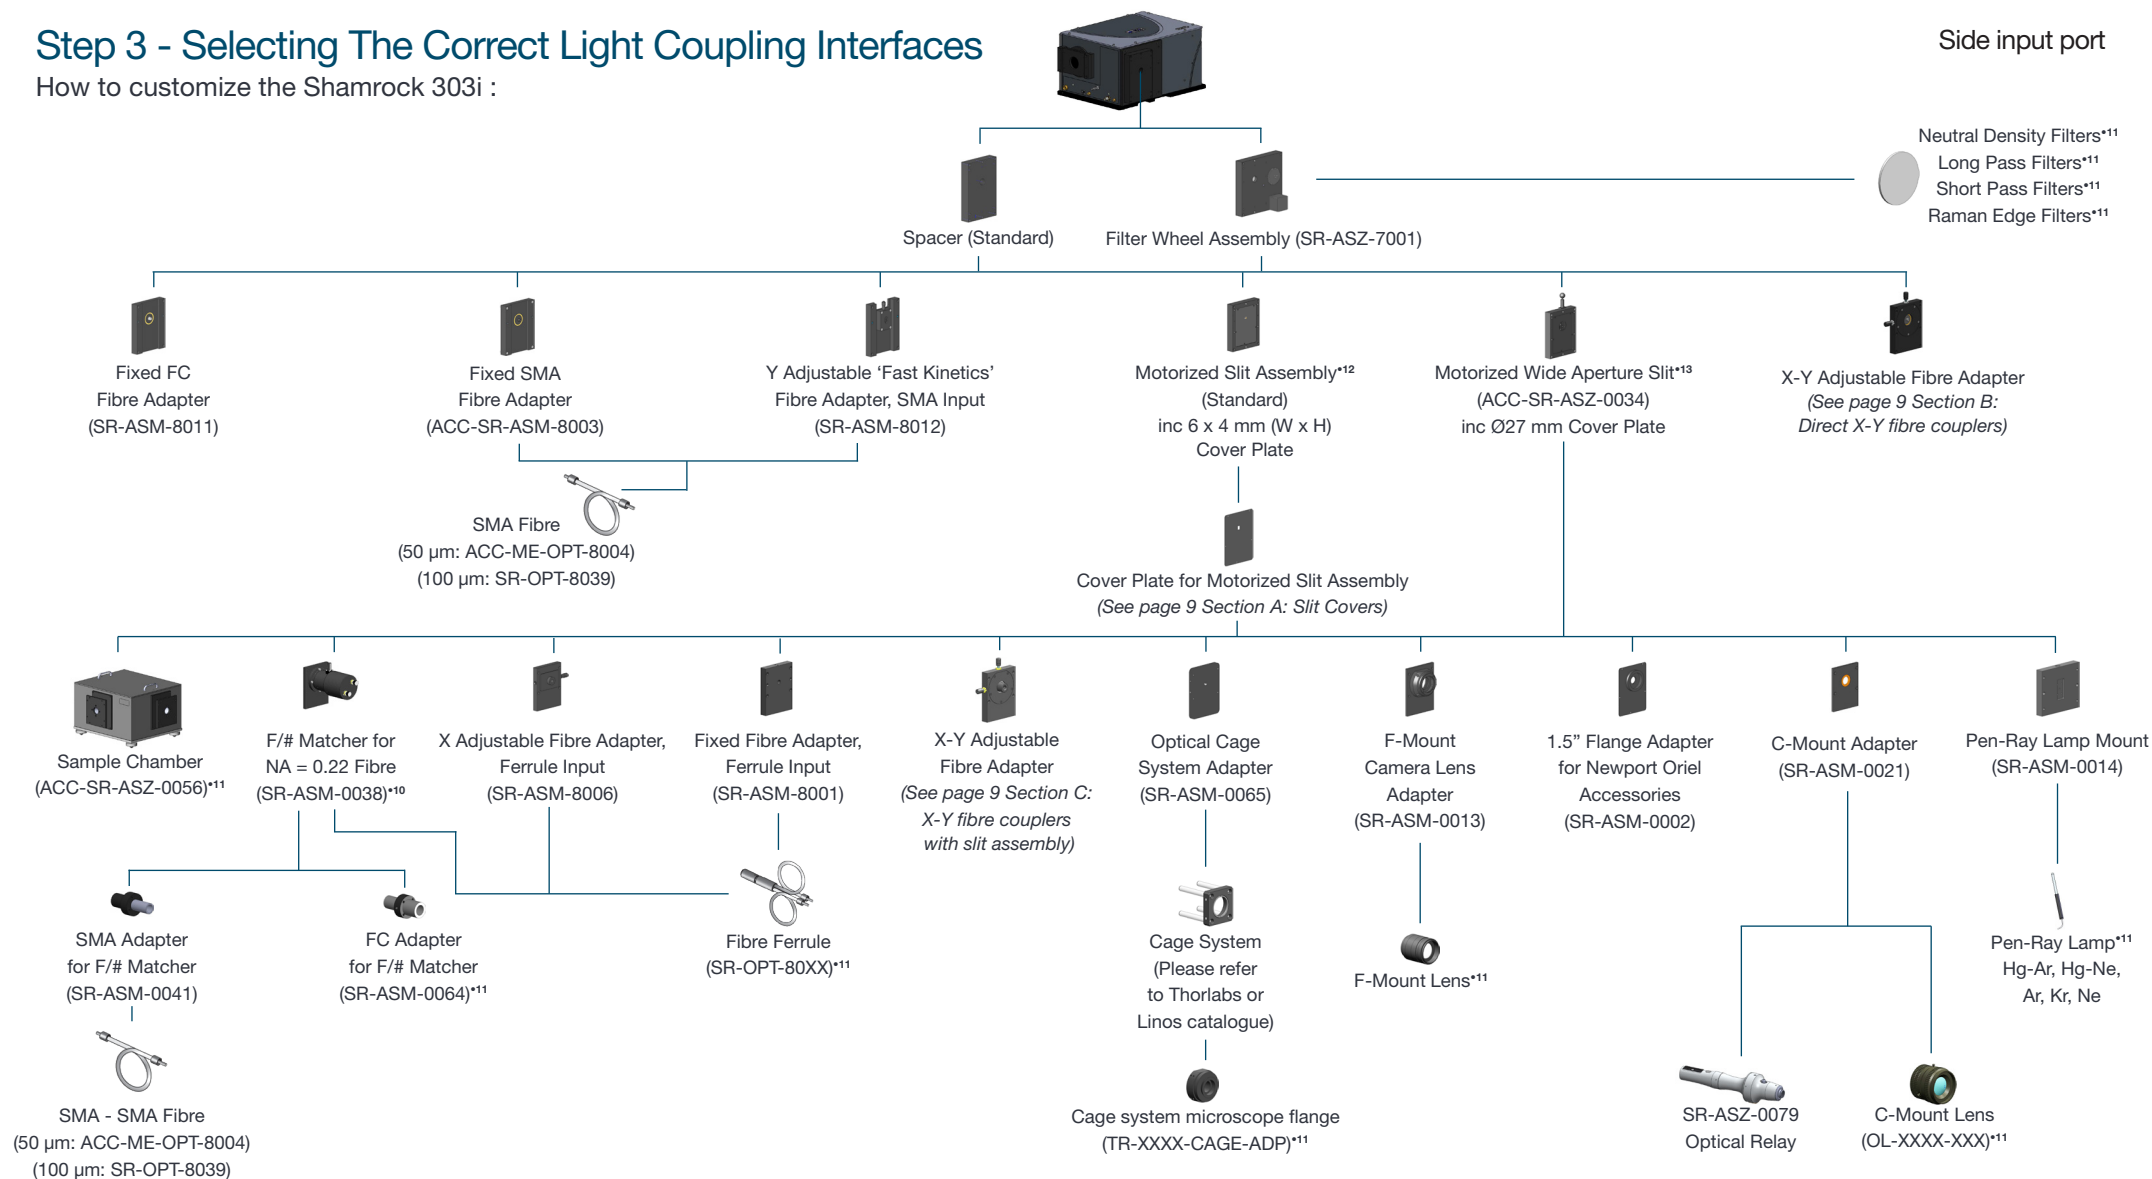

Important Consideration

System throughput is dependent on the grating's angle of operation and may decrease with higher grating operating angles.

Footnotes: Specifications are subject to change without notice

1. In the case of a multiple grating turret order, please specify desired grating configuration for each turret.
2. Typical values quoted with 27.6 mm wide CCD, e.g. Newton DU940.
3. Typical values quoted with 10 µm slit and 13.5 µm pixel CCD, e.g. Newton DU940.
4. Typical values quoted @ 500 nm centre wavelength.
5. Typical values quoted @ 300 nm centre wavelength.
6. Typical values quoted at maximum efficiency wavelength or blaze wavelength unless otherwise stated.
7. Wavelength within the recommended operating spectral region.
8. Indicative values; the working range of these gratings is principally in the region where optical aberrations may alter the system resolution performance quoted.
9. Values shown are representative of a triple grating system, where resolution has been optimised to give the best performance for the three gratings and across the full recommended wavelength range. Useful signal is assumed to be imaged on the entire height of a 6.9 mm sensor (i.e. Newton DU940) and fully vertically binned.
10. Please refer to F/# matcher specification sheet for magnification considerations.
11. Please refer to the local sales representative or website for further information on available options and complimentary accessories.
12. Slit widths range from 10 µm to 2.5 mm motorized.
13. Slit widths range from 10 µm to 2.5 mm motorized (full opening at 12 mm manually for wide aperture slit. Standard slit cover aperture is Ø 27 mm.
14. Require shutterless camera models. Please contact your local representative for further information.
15. Additional I²C cable (ELC-00648) is required when operating Shamrock 303i with these cameras.
16. Recommended for use with fibre-optics and C-mount accessories.
17. Provided as standard.
18. Average measurements using > 30 calibration lines, covering the recommended grating angle operating range with a 1200 l/mm grating.
19. The standard deviation of 20 measurements of a peak's centre-of-mass position: between each measurement the drive is moved 10x including both wavelength and grating changes to reflect typical use.
20. Measured with a 633 nm laser and a 1200 l/mm grating for Full Vertical Binning (FVB) on a 6.9 mm high sensor, and a 1 mm strip vertically centred on the optical axis.
21. Side accuracy measured using a 27.6 mm wide sensor, reflecting the dispersion calibration and step-and-glue accuracy.

Minimum Computer Requirements:

- 3.0 GHz single core or 2.4 GHz multi core processor
- 2 GB RAM
- 100 MB free hard disc to install software (at least 1 GB recommended for data spooling)
- USB 2.0 High Speed Host Controller capable of sustained rate of 40 MB/s
- Windows (XP, Vista and 7)

Operating & Storage Conditions

Operating Temperature 0°C to 30°C ambient
 Relative Humidity < 70% (non-condensing)
 Storage Temperature -25°C to 50°C

Power Requirements

110 - 240 Vac, 50 - 60 Hz
